

Breast Cancer Examination Device

B-Light an extremely useful device for breast self examination (BSE)

Breast cancer is the most common cause of cancer in women, both in developed and less developed world's. Each year thousands of cases are diagnosed of breast cancer. Most of them at late stage. Breast self examination (**BSE**) is very successful program.

B-Light add's great value to **BSE** by assisting women to pick up abnormalities **ANYTIME AND ANYWHERE** in total privacy. Should you see any abnormalities, see your doctor immediately

PRINCIPLE

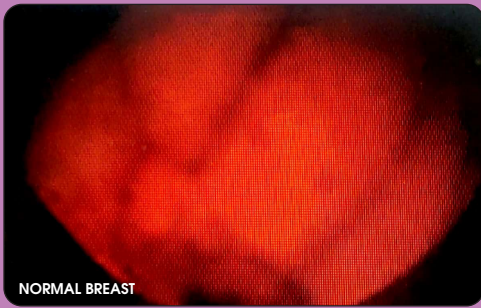

B-Light is absorbed by the blood flowing in the veins thereby highlighting veins along with any blood carrying cyst's or blood filled tissues or mass. Any abnormalities filled with blood supplied by the vein are shown as dark spots or uneven shadow on the breast

HOW TO USE

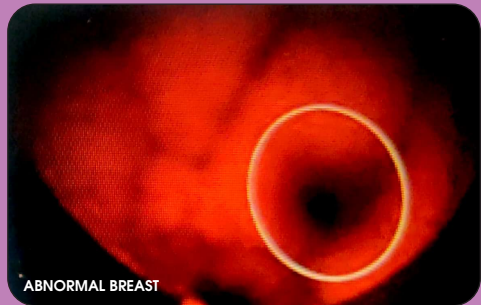

Use the device in dark room. Press the device against the skin till the light enters and illuminates the breast . Move **B-Light** slowly over the entire breast area and check for any seen abnormalities.
